CGT
HEALTHCARE

NEW TREATMENTS.
NEW POSSIBILITIES.
RENEWED HOPE

Cell collection, storage, and coordinated therapy support through a partnership with CGT Global.

EXPANDING CARE THROUGH PARTNERSHIP

Your patients look to you for guidance, options, and a path forward. Supporting those needs may require specialized expertise and resources beyond your institution's existing services.

CGT Global works alongside your team to support cell collection and storage, evaluate potential therapy pathways, and coordinate the clinical, laboratory, and industry resources involved.

BUILD ON YOUR EXISTING CAPABILITIES

Connect your institution's strengths with additional expertise and services. Together, we identify where CGT can support your team and define responsibilities around your program's needs.

EXPLORE POSSIBILITIES FOR YOUR PATIENTS

Whether the goal is preserving cells for potential future use or investigating a treatment pathway, our partnership helps clarify the requirements, available resources, and decisions needed to move forward.

BRING THE RIGHT TEAMS TOGETHER

Collection, laboratory services, and treatment planning can involve several organizations. CGT helps coordinate these connections, with clear communication and responsibilities established for the agreed services.

YOUR PATIENTS AT THE CENTER. OUR TEAMS WORKING TOGETHER.

SPECIALIZED EXPERTISE. CONNECTED CAPABILITIES.

CGT Global brings together clinical knowledge, cell collection, laboratory services, and industry relationships to support your institution's goals. Our team works with yours to identify the capabilities needed for cell banking and potential treatment pathways.

CLINICAL & SCIENTIFIC GUIDANCE

Support for evaluating potential cell and gene therapy pathways, including medical considerations, eligibility requirements, and scientific feasibility. We help your team understand what pursuing an option may involve.

CELL COLLECTION & PROCESSING

Apheresis and laboratory services coordinated around the collection plan and intended use. Preparation, scheduling, handling, and processing requirements are established with the participating teams.

CRYOPRESERVATION & STORAGE

Cell preservation and storage services aligned with the agreed plan. Storage arrangements, documentation, and requirements for potential release or transfer are defined before services begin.

THERAPY & PARTNER COORDINATION

Connections with clinical teams, manufacturers, and development partners to investigate potential options and coordinate next steps. The work may include assessing availability, access requirements, and the resources needed to proceed.

Built Around Your Institution. Focused on Your Patients.

Together, we define the services, responsibilities, and next steps that fit your program.

START WITH YOUR INSTITUTION'S GOALS

Every institution starts from a different place. You may be exploring cell banking services, evaluating potential therapies, or seeking support for an existing program. We begin by understanding your priorities, available resources, and where additional expertise could help.

YOUR PATIENTS & PRIORITIES

Which patient needs are you looking to address? Together, we identify the services and potential pathways you want to explore, from cell collection and storage to therapy evaluation and coordination.

YOUR EXISTING CAPABILITIES

We review the clinical, collection, laboratory, and operational resources already available within your institution. This helps identify where CGT's expertise and services can complement your team and where additional partners may be needed.

YOUR PARTNERSHIP MODEL

We define how the participating teams will work together, including service locations, responsibilities, communication, and patient handoffs. When treatment is being considered, the plan also identifies the treating team and the requirements that must be addressed before proceeding.

A COORDINATED PATHWAY FOR YOUR PATIENTS

Each patient's needs shape the services involved. CGT Global works with your institution to connect the appropriate teams, clarify requirements, and coordinate the next steps.

REFERRAL & INITIAL REVIEW

Your team shares the patient's goals and relevant information. Together, we clarify the requested services and identify the clinical review or additional information needed.

ASSESSMENT & PLANNING

The participating teams review suitability, service requirements, and available resources. Responsibilities, locations, anticipated timing, and authorization are established for the proposed work.

CELL COLLECTION & STORAGE

For patients pursuing cell banking, coordinate preparation, collection, processing, cryopreservation, and storage according to the agreed plan. Define ongoing communication and requirements for potential release or transfer.

POTENTIAL THERAPY PATHWAY

For patients exploring treatment, assess potential options, eligibility, and access requirements. If a feasible pathway is identified, coordinate the relevant collection, manufacturer, and treating-team activities.

CELL COLLECTION

COORDINATED AROUND YOUR PATIENTS

Whether cells are being collected for storage or a potential therapy pathway, preparation begins with the intended use. CGT Global works with your institution and the participating clinical teams to coordinate requirements, scheduling, and the next steps.

BEFORE COLLECTION

Coordinate the medical review, required testing, patient preparation, and collection plan. When collection is intended for a specific therapy, the relevant manufacturer's requirements inform planning. Confirm the location, timing, and responsibilities before scheduling.

DURING THE APPOINTMENT

Collection takes place with the designated clinical team at the agreed location. When apheresis is appropriate, the team explains the procedure, oversees collection, and supports the patient throughout the appointment.

AFTER COLLECTION

Coordinate the documentation, handling, and transfer of collected cells to the designated laboratory or storage service. Patients receive aftercare guidance and contact information, while the participating teams confirm the next steps under the agreed plan.

Clear preparation. Coordinated collection. Defined next steps.

CONNECTING COLLECTION

TO WHAT COMES NEXT

Laboratory & Logistics Coordination

The work continues after collection. CGT Global helps coordinate the laboratory services, handling requirements, and transfers needed for the intended use, connecting your institution with the participating storage, manufacturing, and clinical teams.

PROCESSING & PRESERVATION

Define how the collected cells will be handled and prepared. Depending on the plan, this may include processing, testing, and cryopreservation. When cells are intended for a specific therapy, planning must account for the receiving manufacturer's requirements.

STORAGE & TRANSPORT

Establish where the cells will go, how they will be stored or transported, and who will receive them. Coordinate packaging, temperature requirements, scheduling, and receiving arrangements with the designated laboratory, storage provider, or manufacturer.

DOCUMENTATION & TRACEABILITY

Connect the collection records with the handling and transfer documentation. Clearly defined responsibilities help participating teams track the material, confirm receipt, and address questions or changes along the way.

COORDINATED HANDOFFS. CLEAR RESPONSIBILITIES.

The agreed plan identifies the services, requirements, and responsible teams at each handoff.

PREPARING FOR TREATMENT

CONNECTING THE PEOPLE, PROCESSES & REQUIREMENTS

Moving toward treatment requires preparation across multiple teams. CGT Global works with your institution and the designated treating team to clarify requirements, coordinate supporting activities, and identify what must be in place before treatment can proceed.

CONFIRM CLINICAL REQUIREMENTS

The treating team reviews the patient's eligibility, medical needs, and therapy specific requirements. This may include additional testing, preparation, and confirmation of the appropriate treatment setting. CGT helps coordinate the information and participating partners needed to support this review.

PREPARE THE TEAM & TREATMENT SETTING

Define the personnel, facilities, equipment, and procedures required for the proposed therapy. Planning includes product receipt and handling, treatment administration, monitoring, and escalation arrangements. The partnership plan establishes where CGT provides support and which responsibilities belong to the treating institution.

COORDINATE FOLLOW-UP & COMMUNICATION

Establish how the patient will be supported before and after treatment. Identify the teams responsible for follow-up, communication with referring providers, and responding to patient concerns. Clear contact points help maintain continuity as care moves between organizations.

Treatment proceeds only when the designated treating team confirms readiness and the applicable requirements and authorizations are in place.

CLEAR ROLES. CONNECTED CARE.

DEFINING HOW OUR TEAMS WORK TOGETHER

Each partnership brings together different capabilities. The agreed plan defines which organization provides each service, who makes clinical decisions, and how information and materials move between teams.

Participating Team	Role in the Partnership
Your Institution	Identify patient needs and program priorities, provide relevant records, and coordinate referrals and communication. Define the clinical resources and services your institution will contribute.
CGT Healthcare	Provide specialized guidance and coordinate the agreed collection, laboratory, storage, and logistics services. Connect participating clinical and industry partners and help organize requirements and next steps.
Therapy Manufacturers & Development Partners	Define therapy-specific requirements, including starting-material specifications and manufacturing needs. Confirm product availability, anticipated timelines, and the requirements for release and delivery to the treating institution.
Designated Treating Team	Make clinical decisions, confirm patient eligibility and treatment readiness, and oversee treatment, monitoring, and follow-up. Establish the arrangements for responding to patient concerns or complications.

ONE PLAN. DEFINED RESPONSIBILITIES.

Your institution or CGT may fulfill more than one role, depending on the services and treatment setting. Responsibilities and points of contact are confirmed in the partnership plan.

SPECIALIZED EXPERTISE. PRACTICAL SUPPORT.

WORKING ALONGSIDE YOUR TEAMS

Cell collection, storage, and potential therapy services involve people across your institution. CGT Global helps connect their work, answer questions within the agreed scope, and coordinate the specialized resources needed to move the plan forward.

CLINICIANS & MEDICAL LEADERS

Support discussions about potential pathways, scientific feasibility, and therapy-specific requirements. Connect your clinicians with relevant clinical and industry partners to address questions and inform planning.

NURSING & PATIENT COORDINATION

Help organize patient preparation, scheduling, and communication between participating teams. Establish clear handoffs and contact points so staff understand the next steps and where to direct questions.

LABORATORY & OPERATIONS

Cell preservation and storage services aligned with the agreed plan. Storage arrangements, documentation, and requirements for potential release or transfer are defined before services begin.

ADMINISTRATIVE & PROGRAM LEADERS

Clarify the proposed services, resource needs, responsibilities, and anticipated timing. Define the commercial scope and distinguish CGT services from separately provided or estimated third-party services.

SUPPORT SHAPED AROUND YOUR PROGRAM

The partnership defines the expertise, services, and communication your teams need, with designated contacts for the agreed work.

FROM GOALS TO A WORKING PLAN

DEFINING THE SCOPE, TIMING & COSTS

Your institution may be introducing a new service or adding capabilities to an existing program. Together, we identify a practical starting point and establish what is needed to put the partnership into operation.

1

DEFINE THE INITIAL SCOPE

Identify the patients and services you want to support, the resources already available, and where additional expertise is needed. Select the initial activities to pursue, whether cell collection and storage, therapy evaluation, or coordination of a potential treatment pathway.

2

BUILD THE IMPLEMENTATION PLAN

Outline the activities, participating teams, service locations, and milestones. Identify dependencies such as staffing, testing, partner availability, and required reviews. Establish anticipated timing and the decisions needed before each activity begins.

3

REVIEW COSTS & AUTHORIZE THE WORK

Review the proposed services, estimated fees, and payment terms. Distinguish CGT's services from therapy manufacturer charges and other third-party costs. Confirm what is included, what requires a separate estimate, and how changes to the scope will be reviewed.

TIMING & COSTS FOLLOW THE SCOPE

Implementation timing and costs depend on the services selected and the requirements of the proposed pathway. Your institution's proposal will outline the scope, estimates, and next decisions for review.

TURN POSSIBILITY INTO A PLAN.

Let's Discuss What's Next for Your Institution

Whether you're exploring cell collection and storage, evaluating potential therapies, or strengthening an existing program, CGT Global can help you identify the expertise, services, and partners involved.

Tell us about your patients, your priorities, and the capabilities you want to build. Together, we can define a practical starting point.
